

About Wealth Minerals

Wealth is a mineral resource company focused on lithium asset development in Chile. The Company has positioned itself to develop its substantial license package in the Atacama Salar, adjacent to existing producers who collectively account for almost one third of global supply which is the lowest cost source of lithium on the market today. Additionally, Wealth is developing the Ollague project in Northern Chile, a recently updated highly prospective land package.

Lithium market dynamics and a rapidly increasing metal price are the result of profound structural issues with the industry meeting anticipated future demand. Wealth is positioning itself to be a major beneficiary of this future mismatch of supply and demand. The Company also maintains and continues to evaluate a portfolio of precious and base metal exploration-stage projects.

Atacama Salar - Premier Lithium Asset

Executive Summary from NI 43-101 Report (filed 20 July 2017): The Atacama Salar is host to more than 15% of the world's known lithium reserves, and yet exploration and production of lithium has occurred only in the southern portion of the salar. The proximity of the Project to existing producers strongly suggests that exploration potential is good for the discovery of brines in the northern portion of the salar, underlying the project.

Magneto-Telluric ("MT") survey line (blue line in picture to left) shows a very low resistivity zone (less than 1 ohm-m) that ranges from 500 m to 2 km thick below the surface. This extremely thick zone is interpreted to cover an area of over 200 km² within the Project property. The MT data showing very low resistivity material is interpreted to represent porous media with high salinity fluids. At an estimated average thickness of 1.5 km, the potential aquifer volume highlighted by the MT survey is 150 km³. Top left picture: red outline Wealth Minerals license area on satellite picture of Atacama Salar. Bottom left picture: blue outline Wealth Minerals license area with MT survey results at 500 m below surface, color scale same as horizontal picture.

Salar Comparison	Salar de Atacama ¹	Salar de Maricunga ²	Salar de Olaroz ²	Salar de Hombre Muerto ²	Salar de Cauchari ³
Country	Chile	Chile	Argentina	Argentina	Argentina
Lithium	1 840	1 250	690	740	590
Potassium	22 630	8 970	5 730	7 400	4 850
Magnesium	11 740	8 280	1 660	1 020	1 420
Mg/Li	6.40	6.63	2.40	1.40	2.43
K/Li	12.33	7.18	8.30	9.95	8.30
K/Mg	1.93	1.08	3.46	7.26	3.58

Ollagüe - Positive Location & 3rd Party Drilling

- Ollagüe consists of 8,000 hectares located in northern Chile, Region II, near the Chile-Bolivia border and approximately 200km due north from the Atacama Salar.
- Recent drilling activity by Lithium Chile in the area returned lithium grades up to 480 Li mg/l and surface sampling has returned lithium grades as high as 1,140 Li mg/l.
- Wealth has signed a cooperation agreement with the Indigenous Quechua Community of Ollagüe.
- In January of 2023, Wealth announced a maiden resource estimate for the Ollagüe project, with highlights including:
 - Total indicated resources are **741,000 tonnes LCE grading 175 ml/L**.
 - Total inferred resources are **701,000 tonnes LCE grading 185 ml/L**.

Key Team Members

Henk van Alphen | CEO and Director

More than 30 years of experience in the mining industry. He has been a key player in companies such as Corriente Resources, Trevali Mining, and International Tower Hill.

Marcelo Awad | Executive Director Wealth Chile

Mr. Awad was 18 years with Codelco, ending as Executive Vice President, 16 years with Antofagasta Minerals, the Mining Division of Antofagasta Plc, including 8 years as CEO.

César Jil | Chief Technology Officer

Mr. Jil was Manager of Lithium Extraction Technologies of Albemarle's lithium division. He is an expert in the latest technologies regarding lithium beneficiation, and has worked in the Atacama, Antofalla, and Silver Peak salars/salt lake beds.

Steven Foot | Head Geologist – Chile

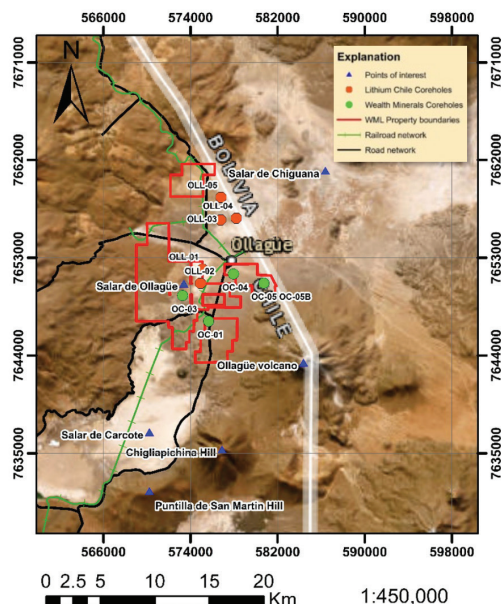

Mr. Foot is a geoscientist with over 30 years' experience. Previous experience includes working as the hydrogeologist for what is now SQM's lithium operations on the Atacama salar.

Jürgen M. Geissinger | Advisory Board Member

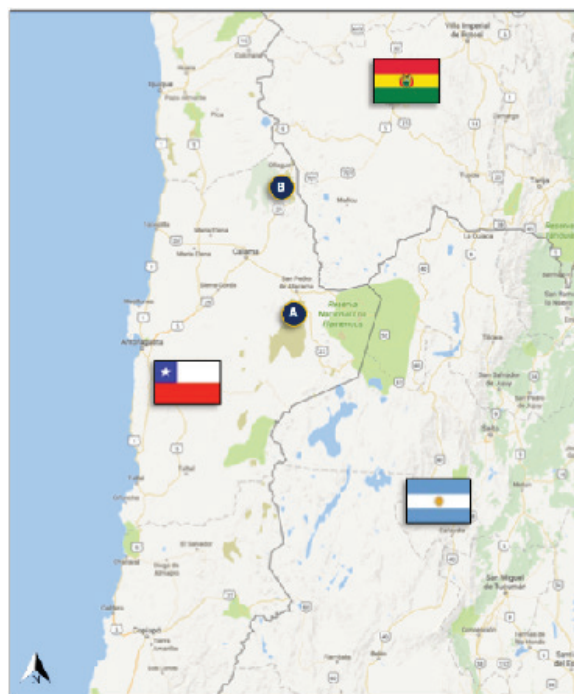

Mr. Geissinger is a renowned German automobile sector manager with a keen interest in current technological changes changing the face of the auto industry. Previously, he served as the CEO of Schaeffler AG, a German based supplier for automotive and industrial applications.

Snapshot of Current Capital Structure

Capital Structure	
Shares outstanding (basic)	309,514,583
Options outstanding	20,625,000
Gross capital realized if fully exercised	CAD \$13,793,000
Warrants outstanding	38,467,263
Gross capital realized if fully exercised	CAD \$19,848,926
Shares outstanding (fully diluted)	368,606,846
Avg option strike and term	\$0.30 and Sept23
Avg warrant strike and term	\$0.35 and Mar23
Market capitalization ¹	CAD 93.3m

Project Map: Chile Focus on the "Lithium Triangle"

A Atacama: 100% royalty-free core 144 exploration concessions; total 46,200 hectares, WML's focus over the next 12-24 months

B Ollagüe: 8,000 hectares of 100% fully-owned, royalty free tenements adjacent to HWY 21 and directly west of Bolivia border
